Abstract

Compounds having bicyclo[4.3.0]nonane (*cis*-hydrindane) carbon skeleton (1) or ^{having (1) embedded in} embedding as a core unit in their structure are widely distributed in nature. Several synthetic methodologies for *cis*-hydrindane have been developed while aiming at the synthesis of a specific target molecule. The bicyclo[4.3.0]nonane skeleton (**bold lines**) is enclosed within ^a tricyclo[5.2.1.0^{2,6}]decane 2 carbon framework. The extraction of ^{the} *cis*-hydrindane carbon skeleton from tricyclo-

[5.2.1.0^{2,6}]decane carbon framework is very attractive since stereofacial bias inherent in 2 should allow elaboration of the *cis*-hydrindane 1 with high degree of stereoselectivity. The detailed account for the stereoselective synthesis of functionalized *cis*-hydrindanes from 2-*exo*-carbomethoxytricyclo[5.2.1.0^{2,6}]deca-3,8-diene-5-one and its methyl derivatives shall be presented.
